Enterprise Employee Operations Hub

Plain-Language Guide & Operations Handbook

Daily Workforce Hub • Internal Helpdesk • Philippines & Denmark Operations

Malayo Tech Operations Team

Version 1.0 – October 2026

What is the Employee Operations Hub?

The **Employee Operations Hub** is a simple, all-in-one web portal designed to make everyday work life easier for everyone on the team. It brings together:

- **Daily Attendance & Time Clock**: Clock in/out, log lunch breaks, and view both Manila and Copenhagen time zones side-by-side.
- **Internal Helpdesk (Ticketing)**: Quick and easy requests for IT support, HR help, equipment, or payroll questions.
- **Company Equipment Tracking**: A clear record of laptops and gear assigned to each team member.
- **Cross-Border Holiday Calendar**: Shared Philippine and Danish calendar so remote teams never miss an upcoming holiday or schedule shift.

The app is ready to use immediately with pre-loaded demo accounts, meaning you can test it right away without complicated database setup.

1 How the Platform Works

1.1 The Three Main Parts in Plain English

Think of the Employee Operations Hub like a friendly modern workplace app. It consists of three simple building blocks working together behind the scenes:

1. **The Web App (Frontend)**: The website you open in your browser. It gives you a clean, easy-to-use screen where you can clock in, see announcements, or submit support tickets.
2. **The Central Server (Backend API)**: The "brain" behind the scenes. When you click a button (like "Clock In" or "Submit Ticket"), the server checks who you are, verifies your permissions, and carries out your request safely.
3. **The Storage (Database)**: The secure digital filing cabinet where employee profiles, attendance records, support tickets, and laptop assignments are kept.

1.2 Key Technologies Made Simple

Part of System	What We Used	Why It Helps You
Web Interface	React 18 & Vite	Fast, instant page updates with no sluggish page reloads. Clean and easy to navigate.
Application Server	ASP.NET Core 8 (C#)	Highly reliable, industry-standard server technology that processes requests securely in milliseconds.
Storage Database	SQLite & PostgreSQL	Comes with an instant zero-setup database for testing, with full support for large company servers when deployed.
Ready-to-Run Pack	Docker & Docker Compose	Allows running the entire platform on any computer with a single command.

Table 1: System building blocks and their real-world benefits

1.3 Instant Start vs. Production Database

To make testing as painless as possible, the application offers two easy database modes:

- **Instant Local Mode (SQLite)**: When running on your laptop, the app automatically creates a local database file (`employee_hub.db`) pre-filled with demo employees, sample tickets, and company policies. You do not need to install any database software.
- **Production Mode (PostgreSQL)**: For hosting on a shared company server, the app connects to a robust PostgreSQL database with automatic data safety and backups.

2 Project Layout: Where Things Live

The project files are neatly organized into two main folders: one for the server (backend) and one for the user interface (frontend):

Server Code (`backend/`)

```
backend/
+-- src/EmployeeHub.Api/
    |-- Controllers/
    |   (Handles web requests)
    |-- Services/
    |   (Core business logic)
    |-- Data/
    |   (Database connections)
    |-- Models/
    |   (Data structure blueprints)
    |-- DTOs/
    |   (Data sent to the browser)
    +-- Program.cs
        (Main startup file)
```

Web Interface (`frontend/`)

```
frontend/
+-- src/
    |-- api/
    |   (Connects to the server)
    |-- context/
    |   (Stores login state)
    |-- views/
    |   |-- portal/
    |   |   (Employee screens)
    |   +-- ticketing/
    |       (Support desk screens)
    |-- components/
    |   (Reusable UI elements)
    +-- App.jsx
        (Main app structure)
```

3 User Experience & Access Levels

3.1 Two Main Areas of the Platform

The top navigation bar lets users easily switch between two clear areas, depending on their role:

3.1.1 Area 1: The Employee Portal (For Everyone)

Every team member—whether an internal staff member or a developer dedicated to a client—uses this portal for their day-to-day work:

- **The Main Dashboard**: An intuitive, all-in-one view that shows you everything at a glance without having to scroll:
  - **Personal Info Card**: Shows your job title, team, department, manager, and any company hardware currently in your care.
  - **Time Clock & Dual World Clocks**: Displays live clocks for both **Manila (PH)** and **Copenhagen (DK)**, plus one-click buttons to Clock In, take a Break, start Lunch, return from Lunch, and Clock Out.
  - **Company Announcements**: Important updates, memos, and news posted by People Operations.
  - **Onboarding Checklist**: A visual progress ring showing how much of your required paperwork and onboarding tasks are complete.

  - **My Pending Requests**: A quick summary of your submitted shift adjustments or overtime requests awaiting manager approval.
  - **Upcoming Payroll Schedule**: Clear countdown dates showing when timesheets close, when approvals must be finished, and when pay is credited.
- **Attendance Tab**: A clear calendar ledger of all your past clock-ins, break times, and total monthly hours.
- **Time Requests Tab**: A simple form to request overtime pre-approval or correct an accidental missed punch.
- **Holidays & Policies**: See upcoming holidays in both countries and review company policies.

3.1.2 Area 2: The Service Desk (For Support & Operations Teams)

Visible only to authorized internal team members (such as IT, HR, and Operations). It provides five straightforward screens:

- **Queue**: View, triage, and solve incoming support requests from staff.
- **Analytics**: Clear, visual summaries of how fast tickets are resolved and which issues are most common.
- **Departments**: View and organize support teams (such as IT, HR, Finance, and DevOps).
- **Access**: Safely assign or update helpdesk permissions for staff members.
- **Roster**: View the list of team members and their client assignments.

3.2 Pre-Configured Demo Accounts (Ready for Testing)

To make it easy to explore the platform right away, the app comes with several pre-made test accounts. You can sign in to any of them using the password `Password123!`:

3.3 Simple Access Permissions

Instead of complicated security settings, the platform uses three clear yes/no permissions for each employee:

1. **Internal Team Member**: Indicates whether someone is an internal company staff member or an engineer dedicated to an external client.
2. **Helpdesk Access**: Controls whether the user can see and work in the internal support desk.
3. **Can Manage Access**: Allows team leaders to grant or change helpdesk permissions for others.

4 What Information the System Keeps Track Of

The system securely organizes all essential workplace data into six clear categories:

- **Employee Records**: Stores your name, work email, job title, department, assigned client (if applicable), and encrypted login credentials.
- **Departments**: The company teams that handle requests, such as *IT Support*, *Human Resources*, *Finance*, and *DevOps*.

Role / Title	Login Email	Team	What They Can Do
Super Admin	gamboa.khinandrei@gmail.com	DevOps	Full access to everything: view all tickets, see analytics, and manage user access.
DevOps Admin	devops@company.io	DevOps	Manages IT systems, technical tickets, and user permissions.
HR Manager	hr.manager@company.io	HR	Handles onboarding, leave, statutory benefits (SSS, PhilHealth, Pag-IBIG), and HR tickets.
IT Specialist	it.specialist@company.io	IT Team	Manages company laptop assignments, VPN access, and technical support.
Finance Officer	finance@company.io	Finance	Manages expense reimbursements, equipment purchase requests, and payroll inquiries.
Client Developer 1	dev.arnel@company.io	Client Team	Dedicated to a Danish client; has access to personal time clock and employee portal only.
Client Developer 2	dev.bianca@company.io	Client Team	Dedicated to a Danish client; has access to personal time clock and employee portal only.

Table 2: Ready-to-use demo accounts for quick testing (Password: `Password123!`)

- **Helpdesk Tickets**: Each request includes a title, detailed description, urgency (Low, Medium, High, or Critical), category (IT or HR), the current status (*Open*, *In Progress*, or *Resolved*), and resolution notes.
- **Company Equipment (Laptops & Hardware)**: Keeps track of company-owned laptops and devices, including make and model (e.g., MacBook Pro), serial number, asset tag, date assigned, and return condition.
- **Cross-Border Holidays**: Maintains the calendar of official public holidays in both the Philippines and Denmark, noting whether a holiday is a working or non-working day.
- **Company Policies & Compliance**: Houses official company handbooks and guidelines. Tracks when each employee reads and digitally acknowledges required company policies.

5 Platform Features & Capabilities (API Reference)

The frontend web app communicates with the server through standard web calls. If you want to test these directly, an interactive testing dashboard is built right into the app at http://localhost:5000/swagger.

6 How to Run and Test the Application

You do not need to install complicated database servers or spend hours configuring settings. The application is designed to start in seconds.

Action / Web Address	Handled By	What It Does in Simple Terms
Logging In & Switching Test Accounts		
`POST /api/auth/login`	Login Controller	Signs in with email and password.
`POST /api/auth/register`	Login Controller	Creates a new employee account.
`GET /api/auth/personas`	Login Controller	Provides 1-click login shortcuts for testing different roles.
Employee Directory & Profiles		
`GET /api/employees`	Employees Controller	Searches and lists all company employees.
`GET /api/employees/{id}`	Employees Controller	Retrieves an employee's full profile, equipment, and tickets.
`POST /api/employees`	Employees Controller	Adds a new employee to the directory.
`PUT /api/employees/{id}`	Employees Controller	Updates an employee's title, team, or client assignment.
`GET /api/employees/{id}/hardware`	Employees Controller	Shows all laptops and gear assigned to this employee.
Helpdesk & Support Tickets		
`GET /api/tickets`	Tickets Controller	Lists all support tickets (filterable by status or team).
`GET /api/tickets/stats`	Tickets Controller	Calculates response times, open tickets, and resolution rates.
`POST /api/tickets`	Tickets Controller	Submits a new support or help request.
`PATCH /api/tickets/{id}/status`	Tickets Controller	Updates a ticket's status (e.g. mark as Resolved).
`PATCH /api/tickets/{id}/assign`	Tickets Controller	Assigns a ticket to a support specialist.
Equipment, Holidays & Policies		
`GET /api/hardware`	Hardware Controller	Lists all corporate hardware assets and their current holders.
`POST /api/hardware`	Hardware Controller	Registers a new laptop assignment to an employee.
`GET /api/holidays`	Holidays Controller	Returns the combined Philippine and Danish holiday schedule.
`GET /api/policies`	Policies Controller	Lists active company policies and guidelines.
`POST /api/policies/{id}/ack`	Policies Controller	Records an employee's digital sign-off on a policy.

Table 3: Summary of system actions and web services

6.1 Option 1: The Quickest Way (Run Locally)

1. **Start the Backend Server**: Open your terminal in the project root folder and run:

```
npm run start:backend
```

Zero Database Setup Required

The server will start at `http://localhost:5000`. It automatically creates a fresh local database with all test accounts, sample tickets, and policies ready to use. You can also view the interactive API screen at `http://localhost:5000/swagger`.

2. **Start the Web Portal (Frontend)**: Open a second terminal window and run:

```
npm --prefix frontend run dev
```

Open your browser and visit:

http://localhost:5173

You can now log in using any of the demo accounts listed in Section 3 (Password: `Password123!`).

6.2 Option 2: Run Everything with Docker in One Command

If you have Docker installed and want to run both the frontend, backend, and a production PostgreSQL database together:

```
docker compose up --build
```

Once finished, open your browser:

- **Web Portal**: http://localhost:8080
- **Backend Server**: http://localhost:5000

7 Why This Helps Cross-Border Teams

Managing a team where developers in the Philippines collaborate daily with clients and managers in Denmark comes with unique everyday challenges. Here is how the Hub solves them:

- **No More Time Zone Confusion**: The dashboard shows live digital clocks for both Manila and Copenhagen side-by-side. Everyone knows instantly whether their colleagues are online, starting their workday, or out on lunch.
- **Side-by-Side Holiday Calendars**: Danish and Philippine public holidays often fall on completely different dates. The platform displays both national schedules in one place, clearly highlighting Danish holidays (like *Store Bededag* or *Ascension Day*) and Philippine observances (like *Araw ng Kagitingan*), so project deliverables are never caught off guard.
- **Clear Hardware Tracking**: When high-value laptops (such as Apple MacBook Pros) are issued to offshore developers, the platform records the asset tags, serial numbers, issue dates, and return condition, keeping equipment inventory accountable and transparent.
- **Philippine Legal & HR Support**: Philippine team members can quickly file tickets for Certificate of Employment requests, annual tax forms (BIR 2316), and government contributions (SSS, PhilHealth, and Pag-IBIG).
- **Client Privacy & Peace of Mind**: Developers assigned to a specific client see only their personal portal and their assigned work. They cannot see tickets or information belonging to other client accounts, keeping client projects strictly private.

8 Updating and Recompiling This Document

This guide is written in LaTeX so it can be compiled into a clean PDF at any time.

To rebuild the PDF after making changes:

```
cd documentation
pdflatex -interaction=nonstopmode main.tex
pdflatex -interaction=nonstopmode main.tex
```

Summary

Source File: `documentation/main.tex` → **Output File**: `documentation/main.pdf`
Audience: All team members, managers, HR specialists, and new developers.
Goal: Clear, straightforward documentation that is easy for anyone to read and understand.
